

eScan Internet Security Suite v11 VS Trend Micro Titanium Internet Security 2011

Why do we need Internet Security?

In this day and age data theft is by far a major concern – be it for organizations or even individuals. Now the question that needs to be answered here is, 'What do we understand by data theft?', 'Is it limited to organizations or does it trickle down to end users/consumers too?'. The answer is simple – data that is of importance to you is also mighty important to snoopers. It could be your school/college project or even specific files and folders. However for organizations, securing every bit is done on a much larger scale. Here it could be anything from financial accounts to intricate details of customers/employees. This is where endpoint protection plays a vital role.

But what do we mean by '**Endpoint Protection**'? In computing terms, Endpoint basically refers to ports to which USB and FireWire based devices connect. Therefore, having these ports left open is a concern as there are high chances of data theft. At eScan we understand the needs of not only our enterprise users but also end users who require protection not only from Malware but also from data theft. Not only can users lock down all endpoints but it also prevents malicious programs from executing as and when a pendrive is inserted.

Moreover with a large number of people logging into Networking Websites, malware writers are beginning to target sites such as Facebook, Twitter, Orkut (to name a few). For instance, 'My 1st St@tus' scam affected thousands of users on Facebook. However such applications don't just get added to your profile but are generally granted access by the user himself. Once allowed, the application can not only acquire profile details but can also post messages on your behalf. It not only ends there, the application then spreads across the network through all who are linked to your profile. While this particular application doesn't infect the PC there are many other who direct you to malicious websites that could be home to Trojans and various other malware. To prevent such rogue instances from taking place eScan comes built with a URL filtering module that prevents web pages from getting redirected to malicious websites or URLs.

In addition to this, personal information can include anything from debit/credit card details, passwords for your personal accounts, bank details etc. To help protect your digital identity eScan ISS provides a much needed secure environment in comparison to other Security Suites. This would include certification levels reached by well known testing bodies such as AV-Comparatives, VirusBulletin and ICSA Labs. However another aspect that also needs to be taken into consideration is the number of false positives detected by the application. Therefore, just having a higher detection rate is never enough but being able to differentiate between malware (known/unknown) and genuine OS files is of utmost importance.

The first half of this document provides a brief explanation of the features that are overlooked by our competitor but are made available in eScan ISS v11. The second half displays the effectiveness of the protection offered by both security companies – eScan and Trend Micro.

Product Name	eScan Internet Security Suite v11	Trend Micro Titanium™ Internet Security 2011
Manufacturer/Developer	MicroWorld	Trend Micro
VB 100% Certified	✓	✓
Unique Technology	MicroWorld Winsock Layer	Smart Protection Network
Proactive Security	✓	✓
Real-Time AV Scanning	✓	✓
Spyware, KeyLogger, Rootkit Blocker	✓	✓
Real-Time File Monitor (Intelligent and Faster)	✓	✓
On-Demand Scan	✓	✓
Anti-Spam (NILP, RBL, SURBL)	✓	✓
Firewall (Inbound & Outbound)	✓	✓
Parental Control	✓	✓
Malware URL Filter	✓	✓
Anti – Phishing	✓	✓
Privacy Protection	✓	X
Application Control	✓	X
Endpoint Security	✓	✓
History/ Reports	✓	✓
Web based Help	✓	✓
Vulnerability detection	X	X
Asset Management	✓	X
Network Monitoring tool	✓	X
Update rollback	✓	Not Documented
Hotfix Rollback	✓	Not Documented
Auto download / update software version	✓	Not Documented
Auto Backup / Restore	✓	X
Remote Support Application	✓	X
Virtual Keyboard	✓	X
Entertainment/Gaming /Silent mode	✓	X
Files and Folders Protection	✓	X
Creating/Burning Bootable Rescue Disk	✓ Windows Based	X
Automatic Patching of Windows® Operating System Vulnerabilities	✓	X
Laptop/Battery /Power saving mode for schedule scan	✓	X
Advanced Self-Protection Feature	✓	✓
Real-Time email Scan	✓	✓
Password protection	✓	✓
Heuristic Scanning	✓	✓
Registration/Activation:(via Web/SMS/eMail/FAX)	✓	✓ Not Documented
Grid-based Web Access/Timing	✓	✓
Personalized Dash Board	X	X
Instant Messenger Encryption	X	X
Pulse/Push Updates	X	✓

Privacy Control

This module has been implemented to help keep your data confidential and to minimize the amount of slack from accumulating over a period of time. However when we speak about confidentiality the module is built towards erasing browsing cache, history, cookies, plugins and various other forms of computing slack that gets left behind either during program installation or browsing the web. In addition to this, users can also add their own set of files and folders that need to be cleaned on a regular basis.

Application Control

Another aspect of Endpoint Security is the Application Control feature. This added feature allows you to block applications from running on your PC. It includes pre-defined computer games, instant messengers, video/music players and P2P applications. In addition to this users can also add applications that need blocking.

Network monitoring tool

In addition to the Firewall, eScan Anti-Virus also features a network monitoring tool that provides a detailed overview of the applications connected to the Internet. Generation of reports is also made available that gives you a detailed summary of the overall data transferred either monthly or weekly. In addition to this, users can also view the top ten applications for the day or you could simply specify the dates that need to be looked into.

Update/Hotfix rollback

At the start of every update eScan v11 makes a backup of the current database. So in the event the application downloads an update/hotfix that's corrupt it automatically rolls back to its previous stable database. However to keep user interactivity at its bare minimum the roll back process has been automated and doesn't require the user to intervene

Auto-backup/restore

The auto backup/restore feature is probably the most striking feature that eScan has. The basic functionality of this is to create backups of critical files that correspond to the Windows OS. So in the event of an infection the auto backup and restore kicks in and restores critical OS related files that are infected or damaged. This whole process is automated and requires no user intervention.

eScan Remote Support

Unlike our competitors eScan comes bundled with a special feature called eScan Remote Support. This module basically allows our support team to remotely connect and troubleshoot eScan related issues. The USP of this feature is that it allows most problems to be resolved remotely without having any support technician sent across. So as a user, you save a lot on time as the waiting period is almost negligible.

However, do keep in mind that this feature doesn't allow you – the user – to connect to our support department but will require you to call our support department and provide the Unique ID and Password that is generated. For security reasons the password is designed to change each time the eScan Remote Support is invoked.

Virtual Keyboard

User privacy is of our highest concern – reason why eScan 11 features a virtual keyboard. The implementation of a virtual keyboard allows users to enter confidential information such as banking passwords, credit/debit card details without any fear of your online identity being stolen. So even if your system is compromised by an unknown keylogger/spyware, the username and password that is entered during login remains protected.

Gaming mode

With the inclusion of the gaming mode users can now enjoy uninterrupted gameplay. Having said that, eScan v11 can now automatically switch to gaming mode once an application is run in full screen. For instance – this mode gets enabled the moment movies, games, PowerPoint presentations are run in full screen. In addition to this, as a user you also have the ability to enable this mode manually. This generally helps when you are in the midst of work that is of importance.

Bootable Rescue CD

Not only do we provide a bootable CD (eScan installation disk) but the program also allows you to create a bootable rescue disk. This helps in eradicating pests such as Viruses, Trojans, Rootkits, Bots, etc. that at times are difficult to remove with the Windows OS loaded. The file can either be downloaded using eScan's built-in download manager or you have the choice of downloading the file using a third-party download tool.

Automatic Installation of Windows Critical Security Patches

A salient feature that our product implements is the vulnerability patching of the Windows Operating System. OS Vulnerabilities are the first cause of concern as most hackers scan for loopholes that allow them to bypass already implemented security settings. The implementation of OS patching in eScan 11 allows the application to directly connect to Microsoft's website and download only critical hotfixes and updates for the OS. This whole process is automated and doesn't require user intervention. So as a user you can be rest assured that your OS stays patched and secured from critical Windows related security vulnerabilities.

Laptop Battery Power Saving Mode

eScan ISS v11 now features a built-in Battery mode wherein it prevents its own system intensive processes such as scheduled scan from running whenever the laptops power saver mode is detected – thereby increasing the overall runtime of the laptop. This feature is totally automated and requires no user intervention.

Malware URL Filter

With social networking on the rise, malware writers are using sites such as Facebook and Twitter as a platform to infect PCs via malicious websites/URLs. To help prevent this, eScan 11 features a malware URL filter that prevents access to infected sites.

Restore Windows Default Settings

Users can eliminate modifications made to their desktop and background settings in the event of a virus attack. This is made possible by accessing the Restore Windows Default Settings via the Tools menu. Once activated, eScan automatically performs a virus check and then sets the system variables to their default values.

Advanced Self-Protection Feature

Malware not only have the potential of infecting a PC but are also capable enough to turn off or disrupt the on-access scanning module of an Anti-Virus. To prevent this, the installation path of eScan comes write-protected. This basically prohibits creation and even modification of installed files. To be more precise – only the product is capable of creating and modifying files.

False Positive measurement of AV product (On-Demand Scan)

AV-Comparatives is an Austrian Non-Profit-Organization, who provide independent Anti-Virus software tests free to the public. It is not only important to measure the products detection capabilities but the overall reliability of the product is of utmost importance. The goal of conducting a False Positive test is to help users differentiate between a good product from a far more superior product.

Before proceeding with the tests both programs have been updated with the latest signatures. The test conducted show the total number of FP's detected by Trend Micro with respect to eScan. A total of 23 FP's were detected in comparison to 5 FP's by eScan.

The following chart displays the number of false positives reported by both programs.

Performance Test

The tests were conducted by AV-Comparatives on an Intel Core 2 Duo E8300 PC with 2GB of RAM and SATAII hard disks. The performance tests were first carried on a clean Microsoft Windows 7 Professional (32-bit) system and then with the installed Anti-Virus software.

The chart shown below is a summarized score of various tests conducted by AV-Comparatives. Tests include file copying, archiving/unarchiving, encoding/transcoding, installing/uninstalling. In addition to this, tests that were also taken into consideration were file download speed and application launch speed. These tests basically give a brief overview of the affects on system performance by individual Anti-Virus products.

PUAs: Detection Rate

PUAs or Potentially Unwanted Applications can be directly linked to spyware, adware, dialers or even misleading applications. They can come across as legitimate programs repackaged and distributed via the Internet. So what you feel is legitimate in fact comes packed with a Trojan or Root Kit that bury themselves deep within the System, oblivious to the Virus scanner.

The following test shows the overall performance of the Virus scanner to detect PUAs and rogue software. The test set used by AV-Comparatives include a total of 82036 samples.

Potentially Unwanted Applications

File Access Time (In seconds)

Installing an antivirus solution shouldn't slow down the overall performance of a system. In other words, it shouldn't be such that the response period of applications double or even triple with their installation. The chart below is a visual description of the overall time taken for applications such as MS Word and IE to respond. The tests were conducted on MS Word and Internet Explorer as they are the most commonly used applications. In addition, folder access time has also been calculated.

File compression/decompression, creation and copy (In seconds)

The following tests were carried out to calculate the time taken to compress/decompress, create as well as copy a set of files locally. And as displayed, eScan surpasses Trend Micro by a fair margin.
